USING THE IHEALTH WIRELESS SCALE LITE
1. Install the batteries
   Open the battery compartment on the bottom of the scale and remove the yellow tab.

2. First-time use
   For your first weigh-in, follow these steps to ensure the Scale and the app are connected and that the date and time synchronize correctly.
   If you have an iOS device:
     1. Enable the Bluetooth on your mobile device (Settings->Bluetooth ->On).
2 Tap the Scale to turn it on.
3 Launch the app to initiate the connection. The Bluetooth icon on your device will light up and stop flashing when a successful connection is established. You will also see the Bluetooth icon on your Scale light up. The Scale is now connected and ready for your weigh-in.

If you have an Android device: Go to Settings, and turn on the Bluetooth. You may need to press “Scan” or “Search” to find the Scale. “iHealth HS4Sxxxx” and “Not Paired” should appear on the device list momentarily. Select the scale name “iHealth HS4Sxxxx” to pair and connect. If the connection is successful, you will see “Connected” appear on the device screen.

3. Your next weigh-in
   Subsequent daily weigh-ins can be taken without being connected to your mobile device, as your weight data is stored in the Scale and uploaded to the app upon your next connection. Real-time weight results are viewable in the app if the Scale is connected to
your mobile device and the app is running when your weigh-in occurs. The Scale can store up to 200 weight measurements. When the memory is full, any new measurements will overwrite the oldest ones.

**SCALE HANDLING & USAGE**

- The iHealth Wireless Scale Lite can measure weight up to 400 lbs.
- For best results, the Scale should be used on a flat, hard surface. Soft surfaces such as carpets or rugs may affect the accuracy of your reading.
- The iHealth Wireless Scale Lite has an automatic shutdown feature to conserve battery power. The following scenarios will cause the Scale to go into automatic shutdown mode:
  - One minute after finishing a successful weigh-in.
  - The battery level is too low to capture an accurate weight reading.

**SOFTWARE UPDATES**

From time to time, the Scale's firmware will be updated to enhance performance. When a software update is available, a notification message will appear in the app. Complete the following steps to install the update:

1. Follow the steps in the "First-time Use" section.
2. You will see a notification message in the app asking for permission to proceed. Select "Yes".
3. The update will begin to download. You will see a cursor on the scale display moving from left to right. The scale will display "0.0" when the update is completed.
Software Update Troubleshooting

If the software update fails for any reason, you might experience one of the following:

1. An error message reading “Er 10” appears in the display area. In this case, the firmware of the Scale will automatically revert to factory settings. The Scale will count to 100 and then back to 0.0. This step requires no user action. When the Scale has finished counting down to 0.0, repeat steps 1-2 in Software Updates for firmware update.

2. The counting from 1 to 100 freezes. Reset the Scale by pressing the “Set” key on the back of the Scale next to the battery compartment and hold it for 8 seconds.
